The ECODETER Chair: Greening, Democratization and Territorialization of Industries in a Comparative Perspective

Launched in February 2025, the 'Greening, Democratization and Territorialization of Industries in a Comparative Perspective' (ECODETER) junior professor chair examines the contrasted emergence of 'green developmental States' through a comparative approach focused on Colombia, France, Indonesia and Uganda.

The ecological transition has become a new reference framework for public policies in many European, North American and South American countries, leading to shifts in how environment and economy are linked. Major or incremental, such shifts raise a series of questions which are addressed by the ECODETER junior professor chair and its research programme, 'Regulation and greening of global value chains' (RECOVAL).

Chair:

Pierre Wokuri

Junior Professor of political science

© Sciences Po Rennes

Objectives

- Comparative North–South research to understand the divergent trajectories of ecological transition policies
- Contributions to breaking down boundaries between academic, artistic and political spheres

Areas

- Public policy and the governance of global value chains
- Global value chains and the ‘green developmental State’
- Greening of production models embedded in global value chains

Subjects studied

environment
textiles transition energy
industry **public** comparative
economy policy analysis
States global value chains
automotive
